The immunogenic response of mice immunized with Actinomyces naeslundii T14V or Actinomyces viscosus T14V to challenge with A. naeslundii T14V or A. viscosus T14V was evaluated. Mice immunized with A. naeslundii T14V showed a high degree of resistance against challenge with either A. naeslundii T14V or A. viscosus T14V. Mice immunized with A. viscosus T14V demonstrated a low degree of resistance against challenge with either A. naeslundii T14V or A. viscosus T14V. The levels of resistance of mice immunized with A. naeslundii T14V were similar to those of unimmunized mice. Mice immunized with A. viscosus T14V were more susceptible to challenge with either A. naeslundii T14V or A. viscosus T14V than were unimmunized mice. Mice immunized with heat-killed A. naeslundii T14V or A. viscosus T14V did not demonstrate a protective response to challenge with either A. naeslundii T14V or A. viscosus T14V.
